Inspired by the essence, authenticity and texture of

ARKÈON

by Giuseppe Bavuso

ARKÈON was conceived as a research laboratory — on material, where Aesthetics and Ingenuity come together in a clear and distinctive language.

The collaboration between Infinity and Giuseppe Bavuso reflects a pure and rigorous vision, where the essence of form interacts with design precision.

STONE KITCHEN

Fossil

Three distinct souls define its identity, each with a unique character. Embodies absolute purity, with an essential and balanced texture.

Is the perfect synthesis of nature and technique. An authentic luxury, almost whispered.

Fossil

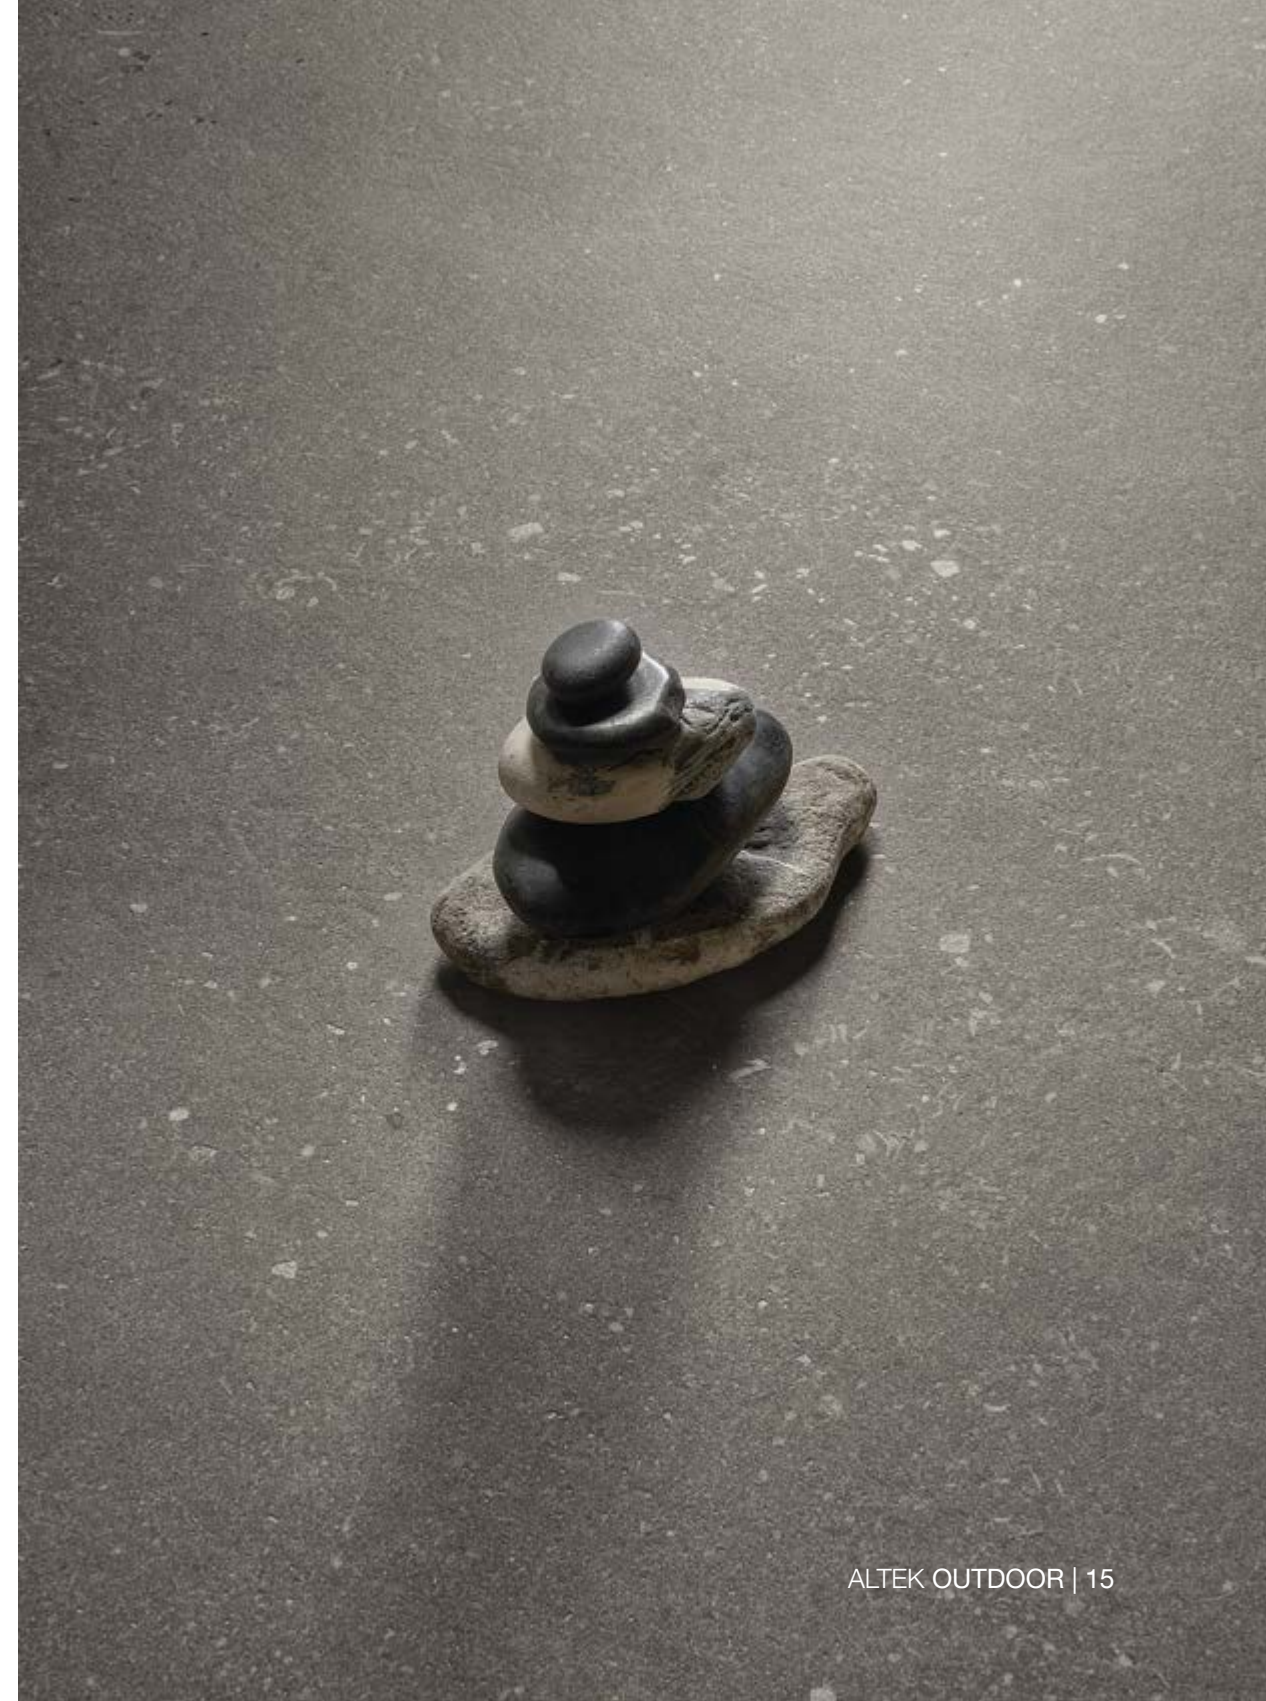

Sandstone

Its pure, homogeneous surface is traversed by delicate mineral fragments—tiny details of light that emerge like traces of a geological past sculpted by time. Each slab strikes a balance between solidity and visual lightness, with inserts that reflect light and add depth to the material.

Sandstone

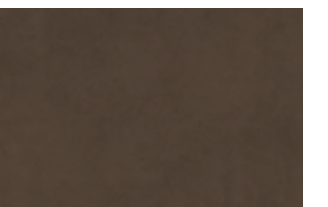

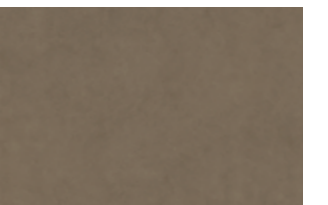

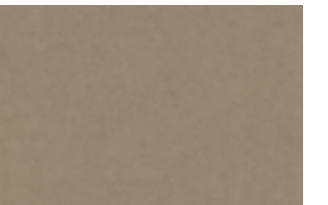

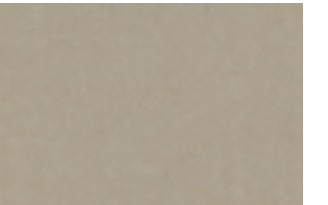

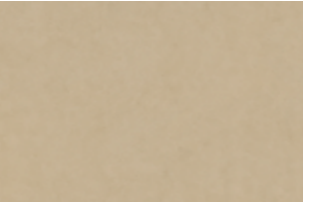

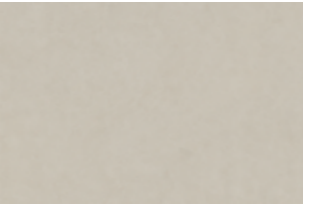

Plaster

It all begins with a spontaneous gesture: meticulously applied spatula strokes inspired by the Arts and Crafts movement, where the human touch gives life to authentic textures. Thanks to an advanced three-dimensional reproduction process, the material retains its tactile and visual depth while ensuring the performance of porcelain stoneware.

Plaster

Fossil

THREE DIMENSIONS — ONE ESSENCE

Fossil is a material tale of balance and detail. Its surface harmonizes the strength of stone with natural refinement, while delicate mineral blooms emerge subtly, creating depth and movement.

Sandstone

DEPTH IN — EVERY DETAIL

Sandstone captures the primordial essence of rock, reinterpreting it through a contemporary language.

Plaster

SHAPED BY GESTURE, — REFINED BY TECHNOLOGY

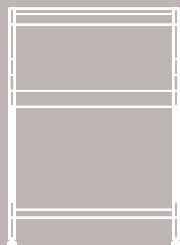

Plaster reinterprets the materiality of hand-worked plaster, transforming it into a design that blends craftsmanship and innovation.

Inspired by the iconic Junkers aircraft, Altek Design and its multidisciplinary team have created a collection of outdoor kitchens.

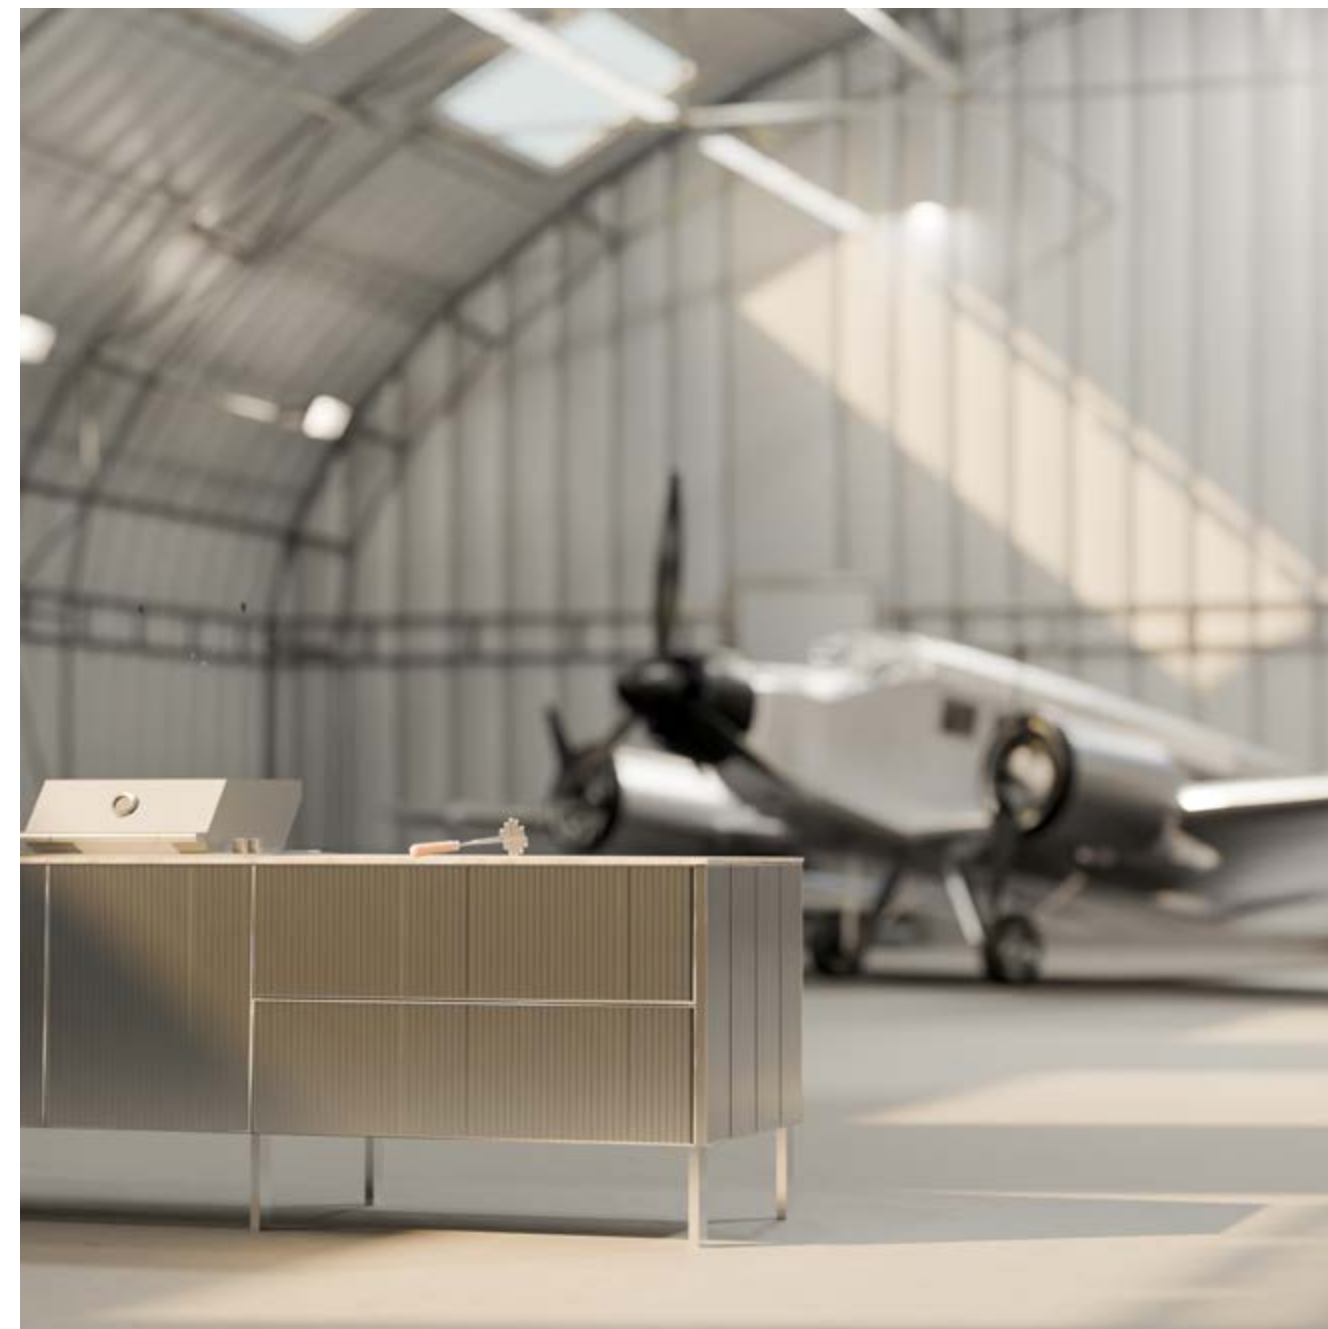

Reinterpreting a new icon for the company

to preserve history and relaunch it at the same time, combining it with innovation and the latest technology.

An: 283 Prof: 75 Al: 90 cms

Reinterpreting the characteristics of Junkers aircraft, the design team highlighted an impossible-to-ignore feature that could be incorporated into the design of the new kitchens: corrugated aluminum. This material, with its structural and aesthetic properties, offered us the solution we were looking for. In aircraft, corrugated aluminium provides rigidity to the chassis and wings, improving aerodynamics horizontally in accordance with the shape of the aircraft. By investigating the behaviour of the sheet, we discovered that corrugated aluminium also became more rigid and resistant vertically, in contrast to its use in aircraft.

This gave us the answer to our questions: what if the chassis of our kitchens had corrugated sheets on the outside, forming a skin, and we used aluminium to structure our pieces? This was not a big problem, as we had a lot of experience structuring our outdoor and indoor furniture by combining it with sintered stone. This combination would not only provide a modern and elegant aesthetic, but would also improve the durability and functionality of the kitchens.

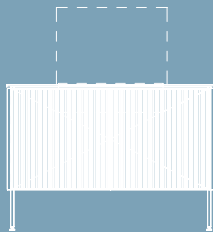

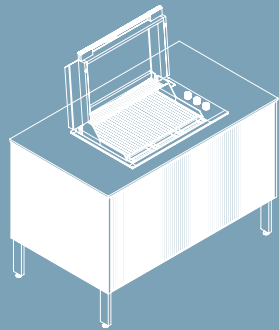

In addition, vertical corrugation facilitates the flow of water in rainy conditions, behaving better than a smooth sheet. This prevents the formation of puddles and maintains a homogeneous appearance in outdoor conditions.

Colour variants

Although our kitchens are mainly made of aluminium, the interiors are combined with sintered stone. The worktop is made of Infinity sintered stone. The drawers are made of aluminium with a stone coating, which guarantees added value to the product.

On the other hand, the structure of our kitchens uses aluminium, giving it a unique look that suits outdoor environments, highlighted by its variety of colours.

FINISHES

INFINITY SINTERED STONE

Infinity slabs offer excellence and innovation for design and architecture.

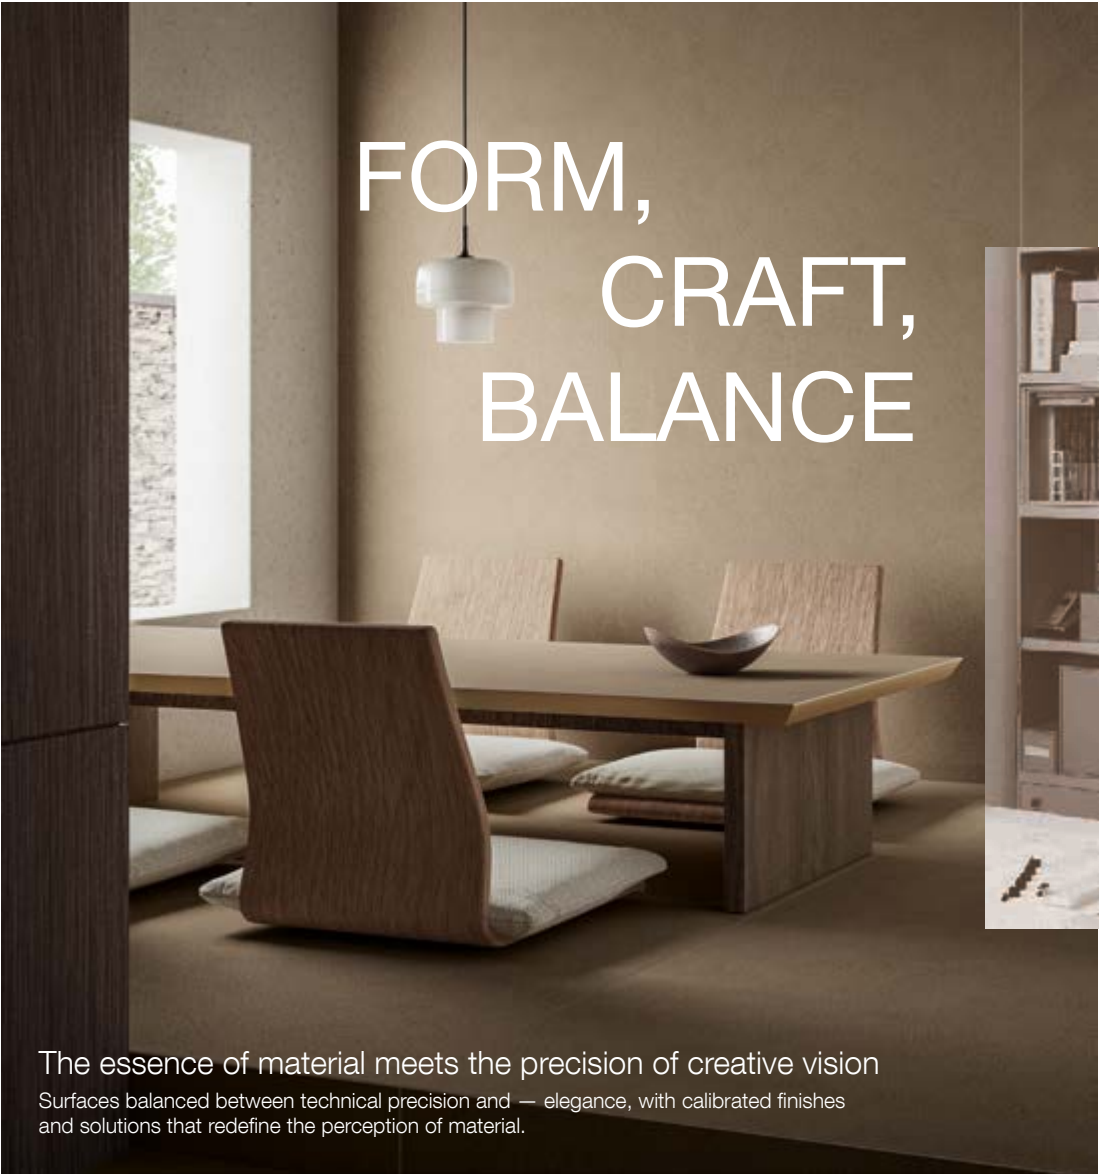

Infinity specializes in the production of high quality large-size porcelain slabs for architecture, interiors and tailor-made solutions.

The wide range of Infinity collections offers a variety of surfaces that combine high technology with innovation, supporting the creativity of architects and designers all over the world.
